

Peerless, **ultra-high-resolution 3D color laser scanning** for digitization and replication of your clients' paintings.

HOW DOES IT WORK?

- 1** The entire painting is safely scanned using Arius' unique **three color laser head scanner**. This captures the surface detail to 10 microns - that's 1/10th of a human hair!
- 2** This data is then processed and compiled into an Art Digital Master File (ADMFTM); effectively the **DNA** of the painting's surface containing hundreds of millions of data points.
- 3** The ADMFTM can then be used to create a textured, physical replication in the Arius in-house studio. It also provides a blockchain and metaverse ready digital file for use in virtual environments.

ARIUS FOR ART ADVISORS

DISPLAY IN MULTIPLE LOCATIONS

Arius elevated print replications enable your clients to enjoy a painting even while the original (or its replication) is on loan.

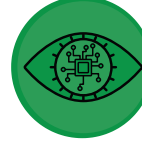

PRICE APPRAISAL & CONSERVATION

The ADMFTM provides the most accurate base data of a painting's current surface condition, facilitating better purchase decisions and saving on future conservation costs.

CONDITION REPORT & INSURANCE

The ADMFTM is a baseline condition assessment. Subsequent scans can identify damage or degradation - even unseen by the human eye - providing objective support for future insurance claims.

FUTURE-PROOF

The ADMFTM provides a blockchain and metaverse ready digital file, allowing you to future-proof your collection.

ARE YOU WORKING WITH DIGITAL ART COLLECTORS?

Offer your clients ultra high quality physical replications of their digital artworks using Arius studio.

ARE YOU WORKING WITH CORPORATE CLIENTS?

Arius **alta™ Creative Studio** enables collaboration with artists to create exclusive digital and elevated prints for your corporate clients collection.

“With perfect detail of a painting's surface and condition, Arius brings a completely new level of knowledge and understanding.”

Silvia Serafini, Art Advisor
